BEFORE

Transform the atmosphere of your living room, den, or other space by updating the old, wood-burning fireplace to a fuel-efficient gas fireplace with a gas fireplace insert.

Whether it's a simple revamp or a complete remodel, attain the fireplace of your dreams with help from the hearth professionals at Best Fire Hearth & Patio.

“

*With the gas insert, not only did it create a new stunning focal point of our home, but we also love the ease and can enjoy it with the click of a button.”*

– Katie Kurtz  
Designer and Licensed Realtor

# Ambient Glow of Real Fire at the Touch of a Button.

Turning an old fireplace into the focal point of your home or business can be done with ease. To update a wood-burning fireplace to gas, the gas-burning insert needs to be fitted to the opening of the existing appliance.

Rather than expend effort using wood to create and maintain flames, a gas fireplace insert burns natural gas or propane for fuel at the touch of a button. This results in a cleaner, more efficient heating solution.

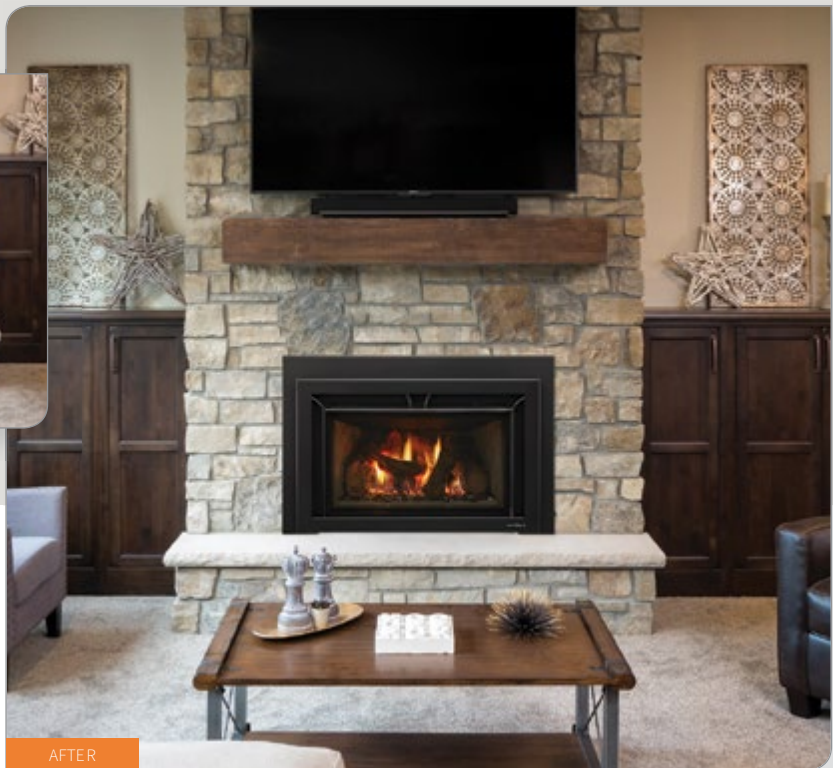

While a traditional fireplace only converts 15% of the energy it generates into heat, a gas fireplace has a heating efficiency of 70%, allowing you to stay warm while also saving money in the long-term.

Additionally, gas fireplace inserts are simple to install — typically within as little as a day, you could be enjoying the ambient glow of a new gas fireplace.

*We couldn't be happier with the gas insert conversion for our fireplace. It's beautiful, full of features and has already given us so much enjoyment"*

—Sandy F.

## REMODELING OPTIONS

# Customized Designs to Suit Any Style.

Refresh the mantel and surround to match the updated look of the new gas insert. From texturized metal to multicolored firebrick, we have a wide range of fireplace finish options to suit any style or taste.

And as all of our technicians have been certified by the National Fire Institute (NFI), customers can feel rest assured that their project will receive expert care from professionals.

Interested in a simple refresh rather than an entire remodel? We can seal drafts and install a gas fireplace insert that impresses, warms, and leaves the heating solution looking better than ever.

## Update with ease

Both traditional masonry and manufactured wood-burning fireplaces can be converted to gas-burning using a gas insert.

Unsure of your options? Our hearth specialists are happy to help guide you to selections that best suit your space and lifestyle.

## UNDERSTANDING THE PROCESS

# Total Remodel Not Required

Visit our showroom in Albany, New York and explore our extensive inventory of gas fireplace inserts, finish options, and more. For those who wish to simply revamp an older fireplace by installing a gas insert, this can typically be completed in the same day.

Although larger projects may require more time and additional visits to the installment area, our hearth experts will ensure every detail is handled with efficiency and care from start to finish.

**A gas fireplace insert can be installed in as little as**

**1** day

## SIMPLE REPLACEMENT PROCESS

1

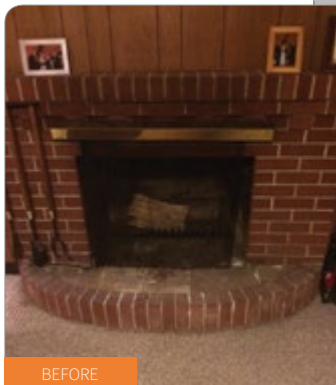

Send detailed photos and measurements of the inside of the existing fireplace or allow one of our certified installers to do it for you. Because gas inserts must be adjusted to fit perfectly inside the opening of the firebox for it to function properly, it is important that these measurements are exact.

2

Visit our showroom in Albany to view our gas fireplace inserts for yourself and consult with one of our hearth experts who can help find the ideal model for your space.

3

Enjoy the convenience of having a team of professionals install the gas fireplace insert, usually within a day.

“

*We added a Heat & Glo insert and it completely transformed the space. It easily solved the chill issue, but we didn't expect it to look so stunning! Now it's the best room in the home – I just wish we would have done it years ago.”*

*– Joe E.*

**ENJOY WARMTH AND COMFORT**

# Keep Your Space Heated All Year Long.

The leading cause of draftiness and heat loss within a home or building is because of traditional wood-burning fireplaces. Without a sealed firebox, cold air can infiltrate the space and disrupt the cozy atmosphere. Additionally, a dated, wood-burning fireplace could be costing you up to \$200 extra in energy costs annually — not including the money spent on chimney upkeep and wood for fuel.

Eliminate additional expenses and enjoy the low-maintenance of a gas fireplace insert.

## SO MANY REASONS TO SWITCH

### Advantages of a Gas Fireplace Insert

- Real fire with easy remote control on/off
- Updated style and design
- Protective glass and screen
- Clean and mess-free
- Air tight – stops cold drafty air
- Hassle-free enjoyment

### Disadvantages of a Wood-Burning Fireplace

- Hauling/stacking wood
- Outdated style
- Risk from wood fire sparks
- Dirty soot, ashes and odor
- Drafty and inefficient
- Rarely used
